

FLACS-Cloud

High-performance computing resource.

FLACS-Cloud is a high-performance computing (HPC) resource available just when you need it.

FLACS-Cloud offers a cost-effective IT solution to manage large volumes of FLACS-CFD simulations on-demand.

It offers scalable computer power at the touch of a button without having to invest in in-house facilities.

Simulations can be run through the HPC cloud infrastructure within the normal workflow patterns of the graphical user interfaces.

Scenario files are automatically uploaded and result files can be downloaded to a local system through secure network connections.

“FLACS-Cloud is available from the FLACS RunManager and FLACS-Risk user interfaces; pre and post processing happens just as in your normal workflow.”

FLACS-CFD software engineer

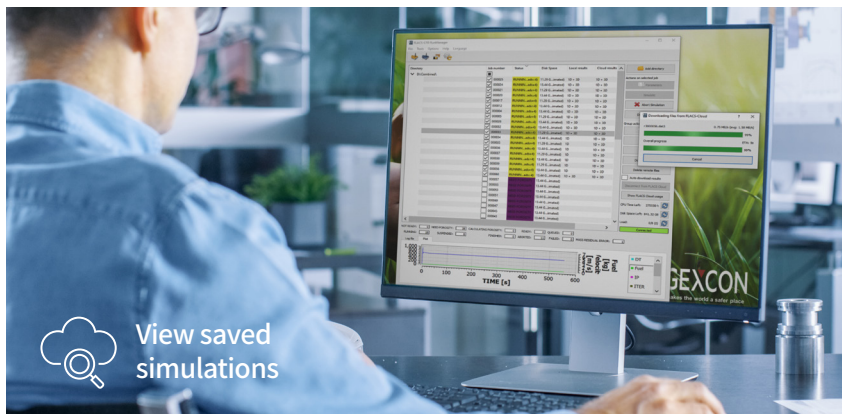

“FLACS-Cloud is a scalable, cost-effective IT solution to manage the peaks and troughs of project work. It enables organisations to access extra resource just when they need it without having to invest in their own facilities.”

Chris Coffey

Global FLACS-CFD Product & Strategic Business Development Manager

Key features

- Scalable, reliable, on-demand HPC
- Secure network connections for data transfers
- Reduced lead time on projects
- Easy to use with existing workflows
- Cost effective ‘pay as you go’ pricing structure

FLACS@gexcon.com

FLACS-CFD is a Gexcon brand

Gexcon is a global knowledge and technology leader in dispersion, fire and explosion safety and risk management. Our experience arises from detailed knowledge of explosion phenomena built up through years of extensive research projects, carrying out safety assessments, performing accident investigations and experimental, physical testing at our dedicated facilities.
